

Torasan™

Core

THE BASIC MOST IMPORTANT PIECE

Core sits at the forefront of innovative seating solutions. Developed to exceed the demands of conference halls, educational institutions and healthcare facilities.

At the centre of its design is the blend of durable components and versatile accessories. Offering a robust and functional solution that doesn't compromise on style.

Core chairs are available with a plastic shell, upholstered seat or fully upholstered.

01

Stacking

The innovative side plug enhances the stability of the Core chairs when stacked, functioning as a guide to lock them securely in a solid column. This design makes transportation with a trolley simple and safe. Additionally, specialised glide prevents contact between the frames when stacked, offering protection against potential damage.

Core chairs can be stacked with arms and writing tablets, providing a versatile and space-efficient storage option.

02

Arms

The arm pad boasts a unique feature: it pivots freely, offering an extra 50mm of space when positioned outward, granting users added comfort and flexibility. When set upright, it enables Core chairs, equipped with arms and writing tablets, to be neatly stacked.

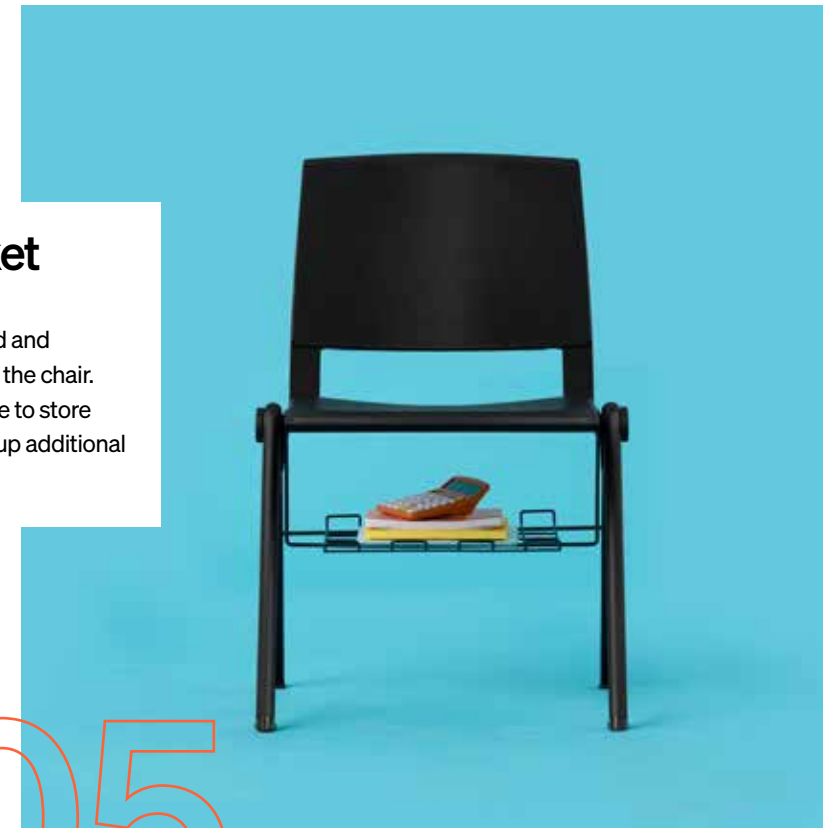

Writing Tablet

An adjustable left, or right-handed writing tablet can be added to provide a convenient surface for users to work on, particularly in environments like classrooms, lecture halls, conference rooms and training facilities.

03

Underseat Basket

Maximising the often overlooked and underutilised space underneath the chair. The basket gives the user a place to store their belongings without taking up additional floor or desk space.

05

Arm Linking Device

A robust metal linking device with a telescopic function is available for chairs equipped with armrests or writing tablets. This optional device connects securely to the base of the armrest, allowing chairs to be linked together.

04

Side Linking Device

An innovative connection plug for linking armless chairs. This linking system provides a practical solution for maintaining order in various seating arrangements.

06

Core Beam is perfect for creating stylish seating units ranging from 2 to 4 seats. Core shells can be effortlessly placed on a beam, offering versatility and functionality. Whether it's a bustling public waiting area or a cosy lounge space, Core Beam provides the ideal solution for any environment. Core Beam seats are available with a plastic shell, upholstered seat or fully upholstered.

07

Table

Substituting a table for a seat is a design strategy that offers several practical and aesthetic benefits.

08

Power

Integrating power modules enhances productivity, aligning with the needs of today's tech savvy user. Having access to power is crucial as we increasingly rely on electronic devices.

Power Module is 1x USB A & C ports
